

## ZLG振动流化床干燥机

## ZLG Series Vibrating Fluid Bed Dryer

### 特 点 Features

- ◆ 采用振动电机驱动，运转平稳、噪音小、寿命长、维修方便。
- ◆ 热效率高，比一般干燥装置可节能30%以上。床层温度分布均匀，无局部过热现象，流态化均匀，无死角现象。
- ◆ 料层厚度和机内移动速度及振幅均匀可在设计范围内调整，可调性好，适用面宽。
- ◆ 对物料表面损伤小，可用于易碎物料的干燥，物料颗粒不规则时亦可使用，不影响效果。
- ◆ 采用全封闭式结构，有效地防止了物料与外界的交叉污染，环境清洁，可连续作业。
- ◆ 当用于高水份物料大批量生产时，可采用多台串联的方式以达到使用要求(典型物料：如聚丙烯酰胺等)
- ◆ The vibration is created by motor.Lt is stable in operation and convenient in maintenance,low noise and long life.
- ◆ High Effect, raw material is heated evenly and heat exchange is fully used and dry capacity is high.Compared with ordinary Dryer,the energy can be saved about 30%.
- ◆ It is good in regulation and wide in suitability. The thickness of raw material layer and movable speed inside the machine and the amplitude can be adjusted.
- ◆ It is small for danaging the surface of raw material.The equipment can be used for drying raw materials that are easy broken.The drying effect can not be affected even if raw materials have anomaly shape.
- ◆ It is sffective to prevent cross pollution between raw material and air because the equipment adapts fully closed structure.The environment of operation is clean.
- ◆ You can string multi-set to rasied capacity of raw materials,such as polyacrylamide

### 概 述 Descriptions

- ◆ ZLG振动流化床干燥机广泛适用于化工、轻工、医药、食品、塑料、粮油、矿渣、制盐、糖等行业的粉料颗粒状物料的干燥、冷却、增湿等作业。
- ◆ The Dryer is suitability in chemical industry,light industry,pharmaceutical,food,plastic,oil,slag,salt,sugar and so on,for drying ,cooling and weting.

### 工作原理 Principle of work

- ◆ 物料自进料口进入机内，在振动力作用下，物料沿水平方向抛掷向前连续运动，热风向上穿过流化床同湿物料换热后，湿空气经旋风分离器除尘后由排风口排出；干燥物料由排料口排出。
- ◆ Raw materials is fed into the machine from the inlet and moves forward continuously along with the level of fluidized-bed under the action of vibration.The hot air passes through fluidized-bed and carries out hot heat exchange with damp raw material.Then the damp air is exhausted out through cyclone seperator and duster and the dry raw material is discharged through discharge outlet.
